

B”H

In the original article, the researchers conducted an experiment with 20 questions. Below is a table showing their findings, including the their model's answers and our model's answers after running the same questions.

Question id	Paper model prediction	True choice	Chat Gpt - LLM choice
1	First choice: D Second choice: B	D	D
3	A D	A	A
4	A C	D	A
5	A D	A	A
9	A D	C	C
11	A B	A	A
12	D A	D	A
15	C B	C	C
17	A D	A	C
19	C D	D	D
20	B C	B	B
21	B C	B	B
22	B D	D	B
24	D B	C	C
25	C B	C	C
26	D A	D	D

B”H

27	D B	B	B
28	C D	C	C
30	D C	D	D
36	C D	D	D

In our next experiment, we'll define these groups:

- a) Human only (Optional)
- b) Prediction only
- c) LLM explanation + LLM prediction
- d) Expert's explanation + the paper model prediction

Our experiment will include 10 questions(as we did in our last RAVEN experiment):

- 6, where our LLM model was correct their model
- 4, where our LLM model was wrong and the paper model was wrong in his first or second choice

Accuracy:

- The paper model: $13/20 = 65\%$
- Chat: $16/20 = 80\%$

Questions:

- a) Questions where both LLM Chat was correct and the paper model
1, 3, 5, 11, 15, 20, 21, 25, 26, 28, 30 - total 11 but we'll choose only 6
- b) Questions where the paper model is correct in the second-best choice and the LLM Chat was wrong:
4, 12, 17, 22
